

PHARMACOGENETICS TESTING

PERSONALIZED MEDICINE

Benefits of testing:

- Better patient outcomes
- Lower risk of an adverse drug event
- Reduction in health care costs
- Better picture of your family genetic risks
- Helps doctors develop better drugs

Humans share around 99.5% of their genome

The 0.5% that does differ between each of us affects our susceptibility to disease and response to medications

Speak with your pharmacist, ask if a Pharmacogenetics test would be right for you!

The right drug, at the right dose, for the right patient.
